Dear Patient,

We want you to receive wellness care – health care that may lower your risk of illness or injury. A wellness visit once a year helps to identify health risks and ways that you can reduce those risks. At your wellness visit, our health care team will review your health history and provide several other services:

- Review cancer screening and immunization recommendation
- A physical exam to check your blood pressure, weight, vision and other areas depending on your age, gender and level of activity
- Recommendations for evidence-based screening evaluations and healthy lifestyle changes
- *A wellness visit does not deal with new or existing health problems.* That would be a separate service and may require a longer appointment or an additional fee. Please let our scheduling staff know if you need help with a health problem, a medication refill or something else. Although sometimes the physician can address the need that day, we may need to schedule a separate appointment to give each issue the time it deserves.
- Please keep in mind that some tests may not be covered by your insurance. You should always review your insurance coverage before completing a test, as you may be liable for the services.

To your health,

The Clearwater Family Medicine Team
